Project Design Phase-II
Data Flow Diagram & User Stories

Date	25 October 2026
Team ID	EN25CS3010534
Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	4 Marks

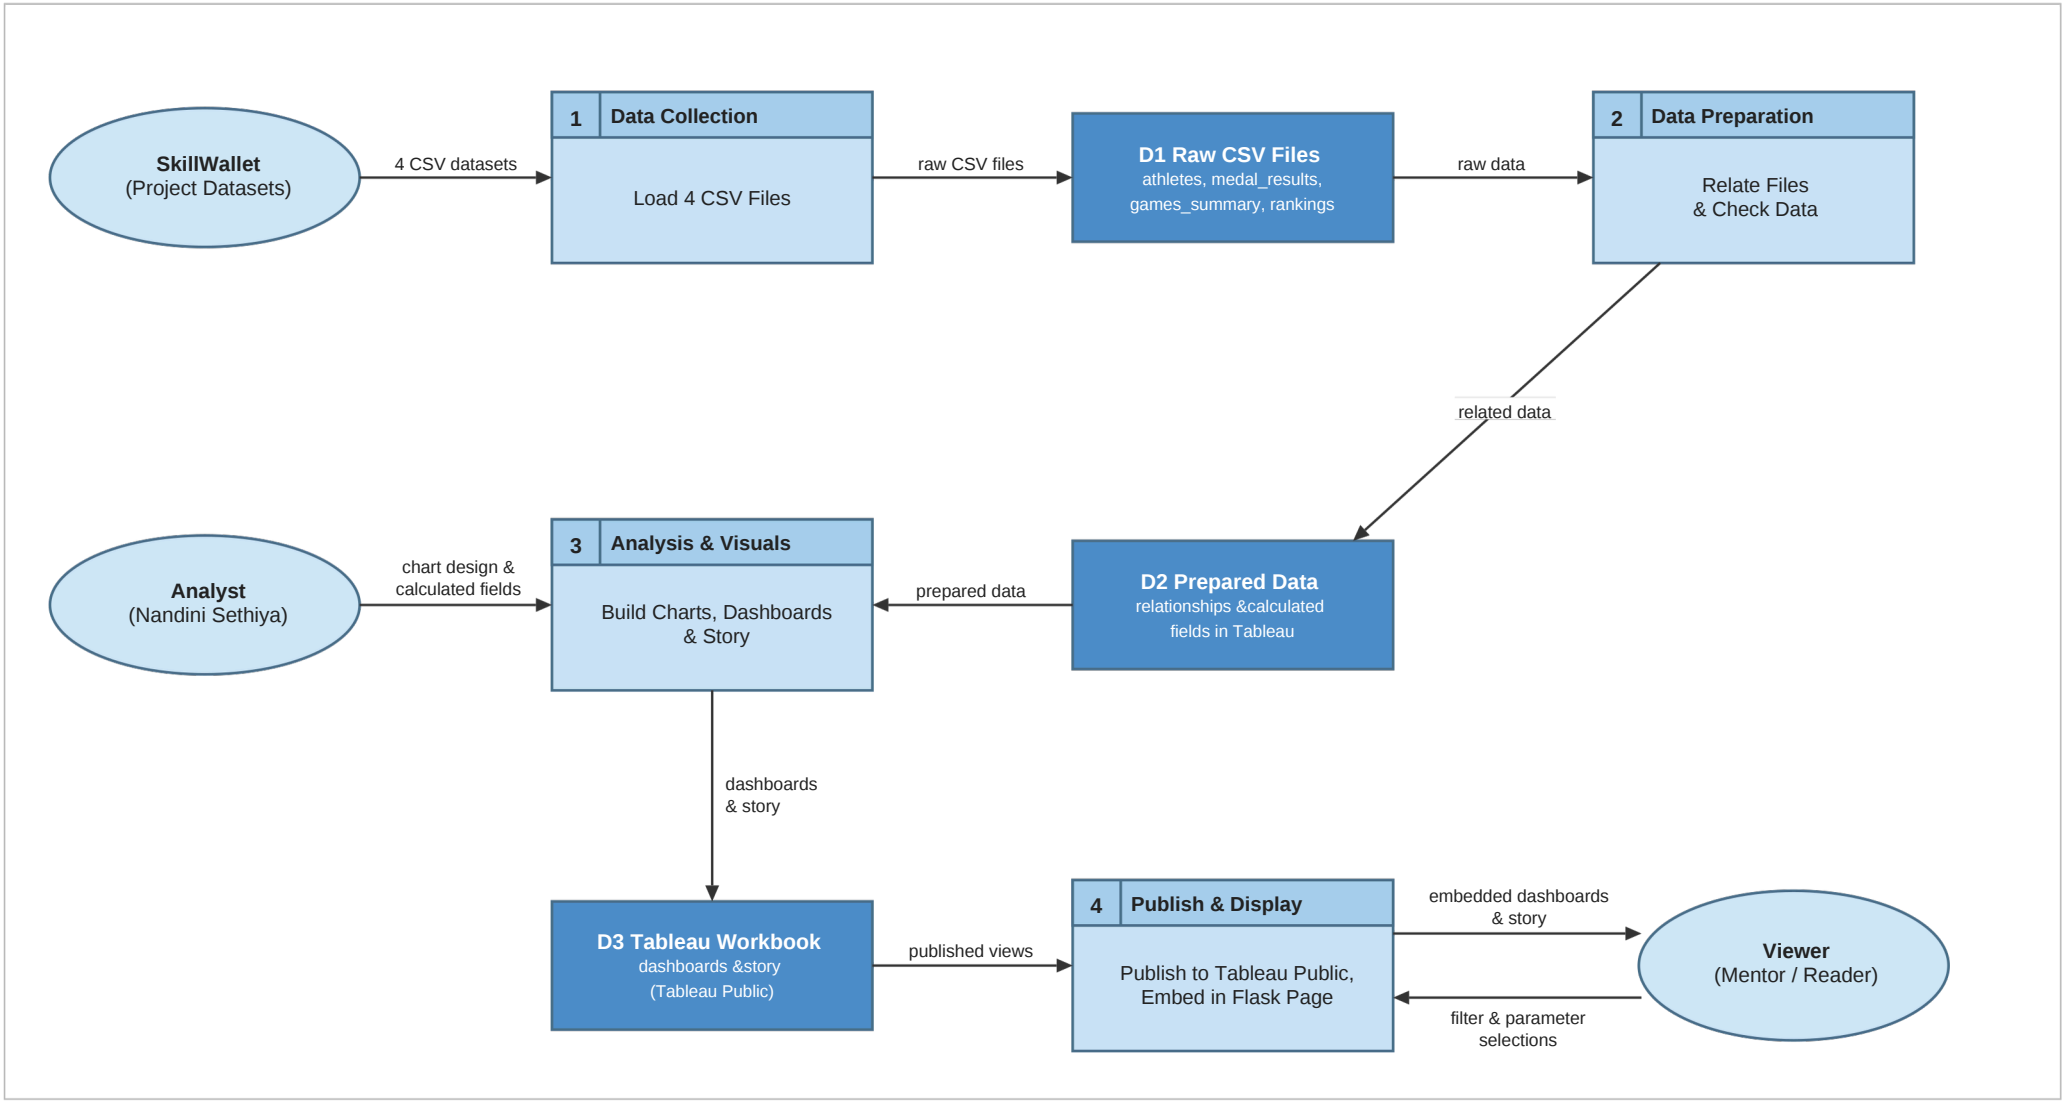

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	**External Entity**	A person, organization, or system outside the project that sends or receives data (e.g., Customer, Payment Gateway).
Rectangle with numbered header	**Process**	An activity that transforms incoming data into outgoing data (e.g., Validate Request, Process Order).
Rectangle (solid fill, no number)	**Data Store**	A place where data is held for later use (e.g., Customer Database, Inventory).
Labeled arrow	**Data Flow**	The movement of data between entities, processes, and data stores, labeled with what data is being passed.

DFD Level 0 - Global Olympic Sports Performance Analysis

User Stories

Usethebelowtemplate to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Analyst (Administrator)	Data Access & Integration	USN-1	As an analyst, I can connect athletes.csv, medal_results.csv, games_summary.csv and alltime_country_rankings.csv in Tableau and relate them on noc_code and year so that all the data is in one place.	All four files appear in one data source and relate without errors.	High	Sprint-1
	Data Processing	USN-2	As an analyst, I can check data types, nulls and duplicates in each file so that the results are accurate.	Fields have the right data types, and no null or duplicate rows affect the counts.	High	Sprint-1
	Data Processing	USN-3	As an analyst, I can extract the Year field and create the KPI Selector parameter so that I can build trend charts and switchable medal views.	The Year field and the KPI Selector appear in the data pane and work in the charts.	High	Sprint-1
	Data Update & Reporting	USN-4	As an analyst, I can publish the workbook to Tableau Public and embed the dashboards and story in a Flask website so that anyone can view them with a link.	Dashboard 1, Dashboard 2 and Story pages open in the Flask website.	High	Sprint-3
	Data Update & Reporting	USN-5	As an analyst, I can refresh the CSV data sources and republish so that the dashboards show updated data.	After a refresh, the charts show the new values.	Low	Sprint-3
Sports Strategist (National Olympic Committee)	Business Insights & Analytical Outputs	USN-6	As a sports strategist, I can see KPI cards for athlete participation, sports categories entered and nations represented so that I understand the Olympic picture at a glance.	Three KPI cards show the correct totals from the data.	High	Sprint-2
	Business Analysis	USN-7	As a sports strategist, I can see average medals per athlete by sport category so that I can decide which sports to invest in.	A horizontal bar chart ranks sport categories from highest to lowest with data labels.	High	Sprint-2
	Business Insights & Analytical Outputs	USN-8	As a sports strategist, I can compare countries by Total, Gold, Silver or Bronze medals so that I can see how my country compares with the top nations.	The KPI Selector switches the bar chart between Total, Gold, Silver and Bronze.	High	Sprint-2
	User Interaction & Analysis	USN-9	As a sports strategist, I can filter by Country, Year and Sport Category so that I can study my own country.	All charts on Dashboard 1 update when a filter is changed.	High	Sprint-2
Sports Investment Analyst (Funding Agency)	Business Analysis	USN-10	As an investment analyst, I can compare sports investment with medal performance for each country so that I can spot nations that win many medals for their investment.	A bubble chart shows investment level and medals won, with bubble size showing medals.	High	Sprint-3
	Business Insights & Analytical Outputs	USN-11	As an investment analyst, I can see average medal efficiency by region so that I can find regions that deserve more support.	A pie chart shows the average medal efficiency percentage for each region.	High	Sprint-3

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
	User Interaction & Analysis	USN-12	As an investment analyst, I can filter by Region so that I can focus on one part of the world.	Dashboard 2 updates when a Region is selected.	Medium	Sprint-3
Broadcast Journalist (Data Storyteller)	Business Insights & Analytical Outputs	USN-13	As a journalist, I can see how total medals changed over the years in a line chart so that I can tell a story about trends.	A line chart shows total medals awarded for each Games from 1992 to 2026.	High	Sprint-2
	Business Insights & Analytical Outputs	USN-14	As a journalist, I can compare medal totals across Olympic host nations so that I can write about home advantage.	A bar chart ranks host nations by medals, and the Host Country filter works.	Medium	Sprint-3
	Business Insights & Analytical Outputs	USN-15	As a journalist, I can see medal efficiency and distribution by sport and region in a donut chart so that I can show regional patterns.	A donut chart shows the medal distribution by region and sport.	Medium	Sprint-3
Viewer (Mentor / Reader)	Business Insights & Analytical Outputs	USN-16	As a viewer, I can open the Tableau story and read the findings scene by scene so that I understand the project quickly.	The story opens with a caption on each scene, and every scene shows the right view.	Medium	Sprint-3
