Project Development Phase
Performance Test

Date	25 October 2026
Team ID	EN25CS3010534
Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	

Project Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	**4 CSV files loaded and related in Tableau:** medal_results.csv (910 rows, 19 columns), athletes.csv (8,000 rows, 26 columns), games_summary.csv (18 rows, 10 columns) and alltime_country_rankings.csv (60 rows, 13 columns). Related on noc_code and year; all views render without delay. 
2.	Data Preprocessing	None required. The four datasets have no null or missing values; only data types were validated (Year set to a discrete dimension, Country given a geographic role) and the medal efficiency formula was checked.
3.	Utilization of Filters	• **Dashboard 1:** Country, Year and Sport Category filters, plus the KPI selector parameter. • **Dashboard 2:** Region and Host Country filters.   Dashboard 1 filters Dashboard 2 filters

4.	Calculation fields Used	• **KPI selector** (parameter): Total, Gold, Silver, Bronze. • **KPI Value**: `CASE [KPI selector]WHEN 'Gold'THEN SUM([Gold]) WHEN'Silver' THEN SUM([Silver])WHEN 'Bronze' THEN SUM([Bronze]) ELSE SUM([TotalMedals]) END` • **Efficiency check**: `[Total Medals]/[Athletes Sent]*100 - [Medal Efficiency Pct]` (result about 0, so the efficiency column is correct).  [Paste screenshot here: Calculated field window (KPI Value)]
5.	Dashboard design	2 dashboards with 15 sheets in total: Dashboard 1 (7 sheets: 3 KPI cards, world map, medal trend line, medals per athlete by sport category, medals by country) and Dashboard 2 (8 sheets: 4 KPI cards, efficiency pie, investment bubble chart, host bar chart, regional donut).
6.	Story Design	1 story with 2 story points: Global Medal Performance (Dashboard 1) and Regional Efficiency and Investment (Dashboard 2).
